## **MP5 Report**

Joseph Martinsen

The following table are my findings from running on my laptop with the following specs

**OS:** *x*86\_64

**Kernel:** 3.13.11-31.current

**CPU:** *Intel i7-7500U (4)* @ 3.500GHz

Memory: 7791MiB

There are three users. The number of request will remain constant at 10000.

With 10 requests channels and 100 requests the time was 1.602s. For some reason, this is slower than my times recorded in MP4 and MP3. There is also a strange bug I was not fully able to resolve that about 50% of the time there was a race condition occurring. The client from MP4 was used.

number of request channels	time	backlog
1	0 0.167	7 40
2	0 0.31	L 40
3	0 0.435	5 40
4	0 1.073	3 40
1	0 0.18	3 10
2	0 0.298	3 20
3	0 0.438	30
4	0.644	40

For large values, the race condition is very prevalent.
